Dear reader,

Welcome to the third issue of the Transport Research and Innovation Monitoring and Information System (TRIMIS) newsletter. TRIMIS is an online platform for researchers to share and discuss innovation in mobility in Europe.

This month we feature the initial Transport Research and Innovation Status Assessment Report which provides an overview of the current transport research and innovation (R&I) status. It also includes indications for actions and implications for future policy developments. Furthermore, we feature a study aimed at tracking the evolution of the attitude of car drivers towards electromobility.

Please visit the TRIMIS website to find out more, and share information on European transport research and innovation.

Kind regards,
The TRIMIS team
