Executive Summary

Amongst all migrants, children form a particularly vulnerable group that need special attention. The Knowledge Centre on Migration and Demography (KCMD), in its mission to support the European Commission's overall response to the opportunities and challenges related to migration, has developed a comprehensive collection of data and related information on migration in general, and in particular on migrant children.

The first report on this subject provides an overview about the current content of the KCMD repository on data and knowledge. As such, the report does not try to replicate information and data that has already been well published by others (e.g. EUROSTAT, UNHCR, UNICEF or the European Migration Network). It concentrates on guidance through the wealth of available information while focussing on aspects that have been less intensively elaborated.

"The Basics" about migrant children in Europe, as this report is called, summarises facts and figures, including the following aspects:

Data repository

- Even though there is essential data missing on disaggregation with respect to age, the **total number** of migrant children in the EU can be estimated to be **6,9 million** in 2018. This figure includes an estimate of 2,6 million EU citizens that live in another Member State and about 4,3 million third country nationals. In relation to the total population of the same age group, the 6,9 million amount to roughly 7%.
- Whilst **stocks of migrant children** from intra-EU migration have been increased by about 32% between 2014 and 2018, stocks of migrants from outside the EU have increased only by half of it (17%), despite the high influx in 2015/2016. In 2018, the numbers of third country migrant children increased by 3%. EU total population remained constant for the same age group and time period.
- Reliable and comprehensive data on numbers of children in migration exist **only on asylum applications** as there is the obligation to systematically report disaggregated data to EUROSTAT. For **stocks of migrants**, comparable data for all Member States exist only for the time since 2014. Disaggregation according to citizenship is available for 21 Member States (abbreviated "EU21" in this report), with missing data from Greece, France, Croatia, Cyprus, Malta, Poland, and United Kingdom. This missing data amounts to roughly 30% for third country nationals and about 40% of intra-EU migration.
- Despite the missing data, there is a clear ranking of nationalities in migrant stocks. **Syria** and **Morocco** lead the list of countries of origins for third country nationals (both around 400.000 persons in the age groups 0-19 in 2018 in EU21), with a share of roughly one quarter together. **Romania** and **Poland** hold the same position for intra-EU migration, with Romania at estimated 986.000 persons (592.000 in EU21) and Poland at estimated 400.000 (240.000 in EU21). Together this represents 45% of all intra-EU migration in that age group. All other nationalities (both for third country nationals and for EU citizens) are well below those numbers.
- Numbers of asylum seeking children are more or less **proportional to those of adults** and around 30% of all asylum seekers. Figures have dropped from almost 400.000 at the peak in 2016 to **185.000 in 2018**, with estimates for 2019 significantly lower.
- The vast majority of asylum seeking children that arrived between 2015 and 2017 came from either **Afghanistan, Syria and Iraq** (60%), or from the **Balkans and Eastern Europe** (15%).

- The share of **unaccompanied children** grew from one sixth in 2010 to one forth in 2015 and dropped to one tenth in 2018. Amongst the unaccompanied children, the age group of 16-17 years old is dominating. Nearly all of them (around 90%) are males.

Individual situation in Member States

- With regard to **migrant children stocks**, there are great differences amongst Member States, both with regard to percentages of whole population and with regard to country-of-origin specific communities. Some accumulations of migrants of certain nationalities can be explained by former ties to the relevant countries of origin or by common language.
- **Sweden, Austria, Hungary and Germany** (in this order) received in the period 2015-2016 an enormous number of children in relation to their own citizens of the same age group, thus creating big challenges regarding reception and integration.
- The **composition of nationalities** both of asylum application and for stocks of migrant children varies strongly amongst Member States. However, **Syria** is usually amongst the top origins for third country nationals; **Romania** and **Poland** for intra-EU migration.
- Countries of origin like **Gambia, Afghanistan, Eritrea, Somalia, Iraq, Guinea, Libya, Mali, Senegal or the Balkans** loose through migration to Europe large shares of young people in the age group 15-19 years. Also, the share of unaccompanied children (mostly males) from some of these countries is extremely high in that age group.

Outlook

Apart from already available data, there are areas for which more specific information would be desirable that will be the **subject of the second report**:

- Unlike EU migrant children, the **status of third country nationals** is often unclear, at least regarding longer term prospects. Anonymised data, regardless how regularly reported, does not tell anything about the development of status of individuals. On the other hand, the prospects on remaining in a certain country has an impact on developing proper support policies.
- Even though the report identifies already accumulations of certain nationalities of third country nationals in individual Member States, such facts do not necessarily identify real larger **communities of migrants**. Such statements would only be possible if relevant **local data** would be available across Europe. "Local" could mean at least at regional level, but preferably in population units comprising of 0,5 to 1 million persons.
- **Age assessment** is a key issue, both with respect to reliable figures on children and with respect to avoid any kind of arbitrariness in the reception of children. Figures about the application and the results of age assessments in the Member States could help to better understand the reliability of age group assignment and to improve the mutual recognition of assessment results.
- Even though **detention of migrant children** is considered to contradict the best interests of the child principle, it is still applied in a number of EU Member States. An ongoing UN Global Study on Children deprived of Liberty is collecting world-wide figures on this phenomenon and will present its report in autumn 2019.

1 Introduction

Children make up an important part of migrant populations around the world but they are less prominent in today's migration debate. Even when images of children undertaking dangerous journeys or residing in refugee camps come to the forefront of media reporting, the attention is often only momentary.

However, migration can shape how children grow up and has an impact on their rights and identities as they become adults.¹ When far from home, travelling alone or separated from their families, negative experiences during migration can also be particularly traumatic for children.

As a result children who are migrating or have migrated require, and are afforded in European Union and international law, specific and appropriate protections. In this vein, the European Commission has stated:

"It is fundamental to ensure that any child needing protection receives it and that, regardless of their immigration status, citizenship or background, all children are treated as children first and foremost."²

Nevertheless, despite the significance of the issue, data on child migration is not always easily accessible, consistently collected or able to give a comprehensive view of the phenomenon. Global data sources may lack completeness or the data may be inconsistent among each other and not comparable across countries. According to UNICEF, nearly one quarter (23%) of the countries around the world do not release data showing the ages of migrants residing in them. In Africa nearly half (43%) do not. And only 56% of global data sources on refugees are disaggregated by age.³

With this in mind, this report gives an overview of the state of play of available data and resources on children in migration, focusing in particular on the EU and drawing on the repositories available to the European Commission's Knowledge Centre on Migration and Demography (KCMD).

What are Children in Migration?

A child is defined in international law as every human who is below the age of 18 years old. The United Nations recognises in its Universal Declaration of Human Rights and Convention on the Rights of the Child that childhood is entitled to special care and assistance. In particular, it states that:

"In all actions concerning children, whether undertaken by public or private social welfare institutions, courts of law, administrative authorities or legislative bodies, the best interests of the child shall be a primary consideration."

The Convention also sets out a series of other principles which define how states should treat children, specifically referring to non-discrimination, the right to life, survival and development and the right to express his or her views and to have those views taken into account.

The EU's Charter of Fundamental Rights mirrors the Convention's main principles. It states that the child's best interests must be a primary consideration in all interactions with EU and Member State institutions and sets out a range of specific rights for children, especially the right to such protection and care as is necessary for their well-being, to express their views freely and have those views taken into consideration and to maintain a personal relationship and direct contact with their parents (unless that is contrary to their interest).

³ UNICEF (2018) *A call to action: Protecting children on the move starts with better data* (New York: UNICEF, available online at <https://data.unicef.org/resources/call-action-protecting-children-move-starts-better-data>)

In this report the definition of children in migration follows that already used in other Commission documents, specifically:

'children in migration' ... covers all third country national children (persons below 18 years old) who are forcibly displaced or migrate to and within the EU territory, be it with their (extended) family, with a non-family member (separated children) or alone, whether or not seeking asylum.

This definition shows that children may be **accompanied** or **unaccompanied**, undertake forced migration or regular journeys and can be asylum seeking or not asylum seeking.

However, the report is not limited to children from **outside the EU** but also covers migration caused by **intra-EU** mobility.

Most children (as statistics in the report will show) are accompanied by parents or guardians when they migrate. Others, however, may be unaccompanied or separated from their parents or guardians. Some move in an irregular status, crossing a border and residing in a country without a formal residence permit. They may also seek asylum once they have arrived at their destination. However, as with adults, the vast majority of children who migrate in Europe do so in a regular status.

Risks of Children in Migration

The residence status and rights afforded to **accompanied children** are dependent to a large degree on the status and rights of their parents or guardians. Before making the journey, visa application forms for children from non-EU countries must be signed by a person exercising parental authority or legal guardianship. When crossing the border, each child must have their own travel document and it is necessary to check that the persons accompanying them have parental custody over them.⁴ Children from non-EU countries can reside with parents who meet the residence conditions of the country they live in, but have to report their presence to the authorities there. Parents who are pensioners or students also have to demonstrate sufficient income for their family to live without needing income support and have comprehensive health cover for them and their family in that country.⁵

Children may also undertake irregular journeys with a parent or guardian. If the parent or guardian applies for asylum, it is recommended that family unity is maintained and they are housed together, except when they do not consent to this or if it is against the child's best interests.⁶ If the parent or guardian is refused entry to a country then the child may be too (unless there is reason to suspect they are being mistreated or trafficked⁷). However, the Parliamentary Assembly of the Council of Europe has also stated that states should 'acknowledge that it is never in the best interests of a child to be detained on the basis of their or their parents' immigration status.'⁸ As a result, it is recommended that non-custodial measures are used rather than immigration detention if a family with children is to be removed from a national territory.

Nevertheless, a range of issues and risks arise for children in contexts of migration. In the UNICEF report "Uprooted" [1], the following issues were presented in reference to the context in Europe:

- **Uneven access to protection measures and resettlement opportunities:** governments would often give priority to migration control interests, without

focussing sufficiently on the specific rights and needs of refugee and migrant children.

- **Family separation:** Throughout Europe, procedures for family reunification can be extremely long, exposing unaccompanied children to risks of violence, abuse and exploitation while they are separated from their families.
- **Immigration detention and enforcement:** Despite good examples on alternatives to immigration detention, asylum-seeking and migrant children and families routinely encounter migration and detention realities that do not match up with existing commitments by the Council of Europe and some countries in the region to work towards ending these practices. In 2014, 17 European Union Member States reportedly detained unaccompanied children and 19 detained families with children⁹.
- **Restricted access to health services:** According to UNICEF, only eight Member States would grant all undocumented migrant children the same level of health care as the children of its own citizens; six totally restrict their entitlements to emergency care only; and 12 allow undocumented migrants limited access to specialist services.
- **Uneven opportunity for education:** According to UNICEF, only 10 Member States explicitly recognize the right of undocumented children to basic education. An additional five states explicitly exclude them from free schooling.
- **Social exclusion and xenophobia:** In a recent survey across the European Union, approximately one-fifth of young migrants reported belonging to a group that was discriminated against¹⁰.
- **Household poverty:** In Greece, Spain and France, between 45 per cent and 55 per cent of children of migrants live in relative poverty, twice the rate of poverty among children born to non-migrant parents. As countries slowly emerged from the 2008 recession, children in migrant families were left behind¹¹. Child poverty increased faster (or fell more slowly) for children in migrant households than for other children. Policies that try to address these challenges need to recognise all the relevant factors that contribute to the mentioned risks.

Unaccompanied or separated children (usually third country nationals) who undertake an irregular journey without a parent or guardian are defined as particularly 'vulnerable'.¹² They can face multiple risks. Some of these were highlighted in a 2016 report from The European Union Committee of the British House of Lords. In this, the authors drew attention to *"a wealth of evidence suggesting that a number of underlying, cross-cutting problems affect unaccompanied migrant children (...) (M)any children have lost trust in the institutions and measures intended to guarantee their rights, safety and well-being."* According to that report, risks faced by unaccompanied children include¹³:

- danger while entering the EU irregularly
- lack of protection while following EU migration routes undetected
- lack of safe reception, reception capacity, proper reception conditions, inspection and monitoring
- measures to prevent movement to their preferred country of destination
- procedural and other obstacles to family reunification
- the risk of administrative detention, including in inappropriate conditions (such as a lack of separation from adults)
- vulnerability to sexual violence, sexual exploitation and trafficking

¹³ See: https://ec.europa.eu/info/policies/justice-and-fundamental-rights/rights-child/children-migration_en

- lack of reliable information and advice, including information about trafficking
- lack of legal advice and support
- use of invasive methods to assess age, with variable results and reliability

According to EU law, the best interests of unaccompanied children must be considered in their interactions with the administration of the Member State they have moved to, whether during asylum procedures,¹⁴ in the provision of reception conditions¹⁵ or when returning them to a country of origin or third country.¹⁶ In many cases unaccompanied children will apply for asylum. In some Member States, children who do not seek asylum are to be treated as all third country nationals and can be removed from the territory.¹⁷ In other Member States, unaccompanied children cannot be refused entry or removed as they are considered to have humanitarian grounds to stay.¹⁸ Other children may be missing or 'abscond' and they are often not included in available data.

Knowledge about Children in Migration

There is a range of sources offering data on child migration around the world and, more specifically, in the EU. These sources give a chance to gauge the scale of different forms of child migration. However, it should be noted that there are gaps in the available data as well, especially in reference to the stock of migrant children resident in different countries over time. This is further complicated by the difficulty of asserting the age of children without reliable identity documents (as a basis for proper age related support) and the fact that individuals move out of child-focused statistics when they turn 18 years old.

In the EU, data covering the situation in all Member States in a comparable way exist from EUROSTAT in three main categories:

- Data on non-EU population in each of the Member States ("stocks"), disaggregated only in larger age groups, with no particular focus on minority status¹⁹; data not available from all Member States.
- Data on asylum applications, disaggregated in larger age groups (but clear distinction between minority and majority)
- Data on migration from outside the European Union into individual Member States ("flows"), again disaggregated only in larger age groups, with no particular focus on minority status¹⁹ and with some Member States missing.

The enormous pressure on the asylum system as of 2015 has clearly drawn most of the attention to figures on asylum applications. On the other hand, recognition rates of asylum application lag significantly behind application numbers. For example, in Germany as one of the largest receiving country of asylum applicants, the recognition rate as refugee was around 1% over the last 10 years, in some years even less (not counting subsidiary protection).

However, the consequences of a decision regarding asylum may strongly differ for children in contrast to adults, including the provisions according to the CRC during the time until the decisions has been taken.

On the other hand, there is also important data missing. For example, the assignment to particular age groups (as a basis for proper age related support) can be challenging when children arrive without documents in Europe. In fact, a significant share of migrant children are found unaccompanied and without reliable identity documents.

¹⁹ Relevant EUROSTAT data on children is only available for age groups 0-4, 5-9, 10-14, and 15-19.

2 Available Statistics on Children in Migration

As indicated in the introduction, this report displays available figures on children in migration that are either third country nationals (from outside the EU) or from another member state. For third country nationals, both stocks of migrant children and numbers of asylum applications will be presented.

The following sections provide an overview of existing data, mainly from EUROSTAT sources. More details from individual Member States can be found in Annex 3. The term “country of origin” used throughout this report will always refer to EUROSTAT’s “country of citizenship” category (rather than “country of birth”).

2.1 EU Asylum Applications

2.1.1 Gross figures of Member States

Table 1 presents the distribution of asylum applications of children between 2009 and 2018. Data has been sorted with respect to decreasing total number of asylum applications in 2018²⁰. Figure 1 shows the same data graphically.

	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018
EU28	49.570	61.005	64.325	76.570	99.745	144.550	368.040	386.410	201.345	184.620

Table 1: Number of first time asylum applications of children per year and country

Germany received by far the highest number of applications of children in absolute figures: almost one half of EU28 in 2017, the year before even more. The top 4 countries (in 2018) alone (Germany, France, Greece and Spain) received about 3/4 of all asylum applications of children. Italy that received the fourth highest number of applications in 2017 (7,7% of EU28) is now at roughly 2% of EU28.

²⁰ An empty table entry means: no data available for the relevant country and year

Figure 1: Numbers and countries of first time asylum applications of children²¹

Children have currently a share of roughly 30% of all asylum seeking migrants. Figure 2 illustrates the share that grew from 25% in 2011 to about 31% in 2018.

Figure 2: Numbers of asylum applications: children and adults (left), share of children (right)

Distinction is usually made between children that are accompanied by family members and those **unaccompanied**, the latter very often also “undocumented”, i.e. without any

²¹ Source: EUROSTAT

or reliable identity documents. The share of unaccompanied children grew from one sixth in 2010 to one forth in 2015, dropped again to one sixth in 2016 and has been at only one ninth in 2018 (Figure 3). Amongst the unaccompanied children, the age group of 16-17 years old is dominating. Nearly all of them (around 90%) are males. Unaccompanied children will be again addressed in section 2.3.4.

There are also countries of origin with extremely high shares of asylum seeking children that are unaccompanied (see Table 16 in Annex 3), with Gambia on top of the list.

When discussing the burden of dealing with asylum applications, including proper reception and integration activities for children, it is interesting to see the number of applications of children per capita as in Table 2.

Figure 3: Age groups of asylum seeking children (accompanied and unaccompanied)

According to that table (order according to the situation in 2018), the ranking is led by countries that have been much less in the centre of public attention (e.g. **Cyprus**, **Luxembourg** and **Malta**) than countries like Italy. Italy has never been at such high rates as it was the average EU value (first row in Table 2), at least in terms of asylum applications. It should also be noted that **Sweden**, **Hungary** and **Austria** received extremely high rates between 2014 and 2016²². Even **Finland's** rate per capita for 2015 was in the same order as that of **Germany** with its huge absolute number of applications. Also, **Denmark** and **Belgium** reached high numbers in 2015, **Bulgaria** in 2016. Table 2 highlights in yellow those values that are 50% higher than the EU28 average.

²² Note that the total number of applications per year (adults and children) are roughly three times higher than in Table 2 (cf. Figure 3). An amount of 100 applications per 100.000 inhabitants is equivalent to 1 application per 1.000 inhabitants.

Table 2: Number of asylum applications of children per 100.000 inhabitants

2.1.2 Countries of origin (asylum applications)

Almost 90% of migrant children that arrived in Europe over the past ten years stem from 30 different countries out of which the top 10 countries represent already two third of them (Table 14 in Annex 3).

Africa (including Maghreb) is the only region with steadily increasing migration of children towards Europe. Since 2011, figures have almost tripled until 2016 (from 14.000 to 40.000 per year). Since 2016, the numbers remain almost constant, with 2018 slightly below the figures of 2016. Still, migrants from **Middle East** (mainly Syrians and Iraqi), **Southern Asia** (mainly Afghans and Pakistani) and the **Balkans** (mainly from Albania, Kosovo, Serbia and Macedonia) dominate. Together these three groups constitute more than half of all asylum seeking children in 2018.

Comparing these figures to those of **adults**, there is a similar trend. The top 20 countries of origin represent 70% and are nearly the same as for children (see Table 15 in Annex 3), with only Syria having a significantly higher share amongst children.

Higher rates of children usually indicate either higher rates of migrating families or higher rates of unaccompanied children. Which of these two options apply can be estimated from Table 16 in Annex 3. There, countries of origin are ordered according to their share of unaccompanied children amongst all asylum seeking children in 2018. Countries towards the top the list have high rates of unaccompanied children. For example, Gambia had rates above 90% between 2015 and 2017, with only 4% accompanied children in 2017. Strongly increasing rates over the last ten years had also Senegal, Bangladesh, Mali, Guinea, Côte d'Ivoire, Ghana, Pakistan and Sudan. High but slightly decreasing rates (above or around 50%) had Morocco, Eritrea, Somalia, Ethiopia and Afghanistan.

2.2 Child Migrant Stocks

2.2.1 Children from Third Countries

Even though asylum application numbers are the best documented fact on migration, the figures do not say anything about the total number of third country nationals in a Member States and nothing about the situation at regional level. First, application numbers are not equal to recognition rate; second, there is other kind of migration than asylum related; third, global figures exist usually only at national level (if at all).

At national level, EUROSTAT provides aggregated figures about non-EU citizens on the territory of individual Member States only for the years since 2014. Disaggregation according to age exists only in age groups where the available group data closest to that of children is the group of 0-19 years (Table 3). According to that statistics, the number of third country nationals in that age group has only increased by 17% from 2014 ("pre-crisis" time) to 2018, in contrast to public perception.

	2014	2015	2016	2017	2018

Table 3: Number of third country nationals aged 0-19 in the EU28 (Source: EUROSTAT)

A good guess for the relevant statistics on children only would be to subtract some 10-15%²³ from the figures of Table 3 thus estimating the number of **third country national children** in the EU in 2018 at around **4,3 million**. This represents approximately 4,5% of EU total population below 18 years.

²³ 40-50% of age group 15-19 years as an estimate of those aged 18 and 19

Table 3 also shows that stocks of migrant children from outside the EU have increased only by 1% in 2015 and 7% in 2016²⁴. In 2017, the increase has dropped to 5% and then further to 3% as a consequence of declining figures of migration from outside the EU. However, total population of the same age group remained approximately constant.

In order to understand the dimension of children related data, Table 4 provides the total numbers of third country nationals in the EU (adults and children), both in absolute numbers and in percentages of the total population living on the territory of the listed Member States.

Table 4: Number of third country nationals in the EU (left: absolute numbers, right: as percentage of total population)

According to Table 4, Estonia and Latvia would by far host the largest number of third country nationals in relation to native population. However, for both countries (and for many other EU countries as well) high numbers of third country nationals are from close neighboring countries to the EU (like Russia in the case of Estonia and Latvia). Furthermore, Table 5 shows that the ranking with regard to percentages is quite different for the age group 0-19 years.

Figure 4 displays the percentages of native and non-native (non-EU and from other Member States) population aged 0-19 in 2018, ordered by increasing share of non-native population.

Strong increases in the share of third country nationals (aged 0-19) since 2014 can be observed in **Austria, Germany, Sweden, and Malta**; still **significant increases** in **Denmark, Slovenia, and The Netherlands**.

²⁴ The relevant figures from EUROSTAT are always from 1 January of the year in question.

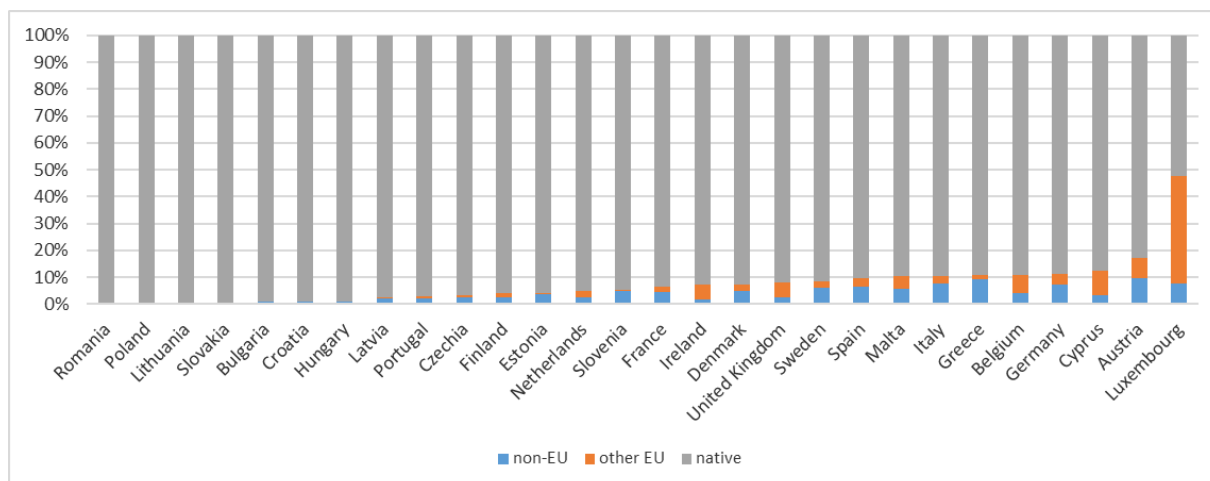

Figure 4: Percentages of native and non-native population aged 0-19 in 2018

Table 6: Numbers of third countries nationals aged 0-19 in EU21²⁵ in 2018 (Top 40 only)

For the country of origin (Table 6), there is data available only for the years since 2014. Detailed disaggregation in terms of country of origin and age is not available for the following Member States: Greece, France, Croatia, Cyprus, Malta, Poland and the United Kingdom. For all other EU21 countries one can find disaggregation also for the years before 2014. Therefore, this data (roughly 30% of all persons in the age group 0-19) is missing in Table 6. However, even without the missing data, countries **Syria, Morocco, China, Turkey, Afghanistan, and Albania** clearly lead this list, with a share of approximately one third of all third country nationals aged 0-19 in EU21.

Regarding challenges to integrate children in the educational systems of the host country, Table 5 displays the percentages of third country nationals aged 0-19 of the total population of the same age group. Even though this comparison needs to be broken

²⁵ without figures from Greece, France, Croatia, Cyprus, Malta, Poland, and United Kingdom

down into smaller age groups, the table gives already an impression in which countries the situation might be particularly challenging. It also depends on the composition of third country nationals in the individual Member States. This is summarized in Table 7. The full tables of available information can be found in Annex 3.

Austria	Almost 20% are considered of unknown origin or stateless , the second highest percentage of all Member States (behind Netherlands). The largest portion of nationality is Turkey (15%), followed by Serbia (13,6%), Afghanistan and Syria (around 12% each). The Balkans adds up to roughly 30%. The largest groups from Africa stem from Somalia (1,4%) and Nigeria (1,2%). The overall share of third country nationals has increased from 7,2% in 2014 to 9,5% in 2018.
Luxembourg	By far the largest group comes from Montenegro (14,2%). In total, persons with origin from The Balkans add up to about 32%. A particularity for Luxembourg is a larger group from Cape Verde (6,3%). Share of third country nationals is almost constant at 7,6% .
Italy	Roughly 38% of all persons aged 0-19 come from the three countries Albania (14,5%), Morocco (13,9%) and China (10,1%). The region of North Africa is represented by roughly 22%. From the 29 countries of origin with at least a share of 0,5% there is also an exceptionally large group from the Philippines (4,5%). In contrary to public perception, the share of third country nationals has slightly dropped from 8% in 2014 to 7,7% in 2017. Nevertheless, this share is still higher than in most other EU countries.
Germany	Until 2015, persons from Turkey formed the largest group. In 2018, this share has been reduced to about 10%. With the crisis year of 2015, Syria is now the top country of origin (27,6%). Afghanistan and Iraq have a share of together 17,7%, followed by countries from The Balkans (13,4%). Remarkably, the largest groups from Africa are from Eritrea and Somalia , with a share of only 1,6% and 1,3%, respectively. The overall share of third country nationals has increased from 4,25% in 2014 to 7,3% in 2018.
Spain	Less surprisingly, the largest group is from Morocco (40,6%). The second largest single nationality is China (9,4%). From Central and South America the volume adds up to roughly 25%, led by Columbia (3,6%) and Ecuador (3,2%). All other nationalities are less than 3,1%. Share of third country nationals is round 6,6% in 2018 (down from 7% in 2014).
Sweden	Roughly two third of the persons are either of unknown origin or stateless (9,7%) or from the 5 countries Syria (29,3%), Afghanistan (10,1%), Somalia (8,1%), Eritrea (7%) and Iraq (3,9%). All other non European nationalities are well below 2%. The overall share of third country nationals has increased from 4,3% in 2014 to 6,3% in 2018.

Denmark	Denmark has a much broader composition of different nationalities than in most other Member States, with the exception of people from Syria (24,4%) and Turkey (7,4%). From all the other countries, only Somalia (5,3%), Afghanistan (4,6%), Iraq (4%) and Pakistan (4,3%) have a share larger than 4%. The total share of third country nationals is 4,9% .
Slovenia	Most of the third country nationals are from Balkan countries (90%). The total share of third country nationals is 4,8% .
Belgium	The largest group are from Morocco (10,5%) and Syria (10,4%). Larger shares also have Afghanistan (6,2%), Democratic Republic of Congo (5,3%), Turkey (4,9%), Iraq (4,5%), Guinea (4%) and Russia (3,9%). The total share of third country nationals is 4,1% .
Estonia	Almost 90% are from Russia , Ukraine or people that have become "recognized non-citizens" once Estonia joined the EU. This adds up to a share of third country nationals of 3,5% .
Finland	The largest third national group are clearly from Russia (15,4%). However, Finland has also larger groups from Iraq (11,6%), Somalia (8%), Afghanistan (9,2%) and Syria (8,3%). The total share of third country nationals is 2,6% .
Czechia	More than three quarters are composed by the three countries Ukraine (34,4%), Vietnam (29,6%) and Russia (12,3%). The total share of third country nationals is 2,5% .
Latvia	The largest group form persons that have become "recognized non-citizens" once Latvia joined the EU (65%). Most of the others are Russian (20%).
Portugal	The largest group of nationalities are those with primarily Portuguese language (55%), led by Brazil (26,5%) and Cape Verde (12,2%). Other larger nationalities are from China (12,7%) and Ukraine (9,3%).
The Netherlands	Apart from the large group of stateless persons or of unknown origin (17,6%), the two dominating nationalities are Syria (25,9%) and Turkey (9,3%). Other larger groups include Morocco (4,2%), Eritrea (7,2%) and China (4,1%). Overall, the share of third country nationals in this age group is 2,5% in 2018.
Ireland	The largest share is formed by persons from the United States (10,6%), followed by India (9,1%), China (8,2%), Nigeria (8,1%), Pakistan (5,7%), Brazil (5,7%) and the Philippines (5,1%). The remaining 50% is spread amongst a large number of nations.

Table 7: Summary of available information about the composition of third country nationals aged 0-19 years in EU21

2.2.2 Children from other EU Member States

Figure 4 in section 2.2.1 indicates that the share of persons aged 0-19 from other EU Member States are in most cases below the shares of third country nationals of the same age group, with Ireland, Belgium, Luxembourg, and Slovakia the only exceptions (all figures in this section from 2018).

Table 8 displays for all EU Member States the total number of persons among its population below 20 years that possess a different EU citizenship²⁶.

Again, in order to estimate the numbers of children only, the listed figures need to be cut by 10-15% (cf. section 2.2.1), thus resulting in **roughly 2,6 million intra EU migrant children** in 2018 or 2,7% of total population in that age group.

Host country	2014	2015	2016	2017	2018

Table 8: EU immigrants (below 20 years): Numbers hosted in EU Member States

The figures of Table 8 suggest that intra-EU mobility annually increased by 7-8% between 2014 and 2017. In 2018, the increase dropped to 5%.

Table 9 displays to these figures the corresponding countries of origin; more precisely, the number of EU citizens of age group 0-19 years that lived in another EU country between 2014 and 2018, however, with missing figures from Greece, France, Croatia, Cyprus, Malta, Poland, and United Kingdom as host country. Unfortunately, the missing data amounts to almost 40% of the total mobility (differences between total figures per

²⁶ Multiple citizenships not taken into account.

year in last rows of Table 8 and Table 9). More detailed information can be found in Annex 2.

When putting these figures in relation to the total number of citizens of a certain EU Member State, the list is led by Romania (12,6% of total population below 20 years), Bulgaria (9,3%), Croatia (7,5%), Estonia (5,6%), Lithuania (5%), Latvia (4,3%) and Luxembourg (4%). Portugal, Poland, Slovakia, Greece and Hungary follow around 3%. These countries also show significant increase of emigrants to other EU countries between 2014 and 2018. All other Member States are almost constant at emigration rates between 0,5% and less than 2%.

These percentages are likely to be significantly higher when taking into account the missing data of the countries mentioned before. If the missing share of data would be proportionally assigned to all Member States (i.e. some 40% more), the share of emigrated persons aged 0-19 from Romania could potentially climb up to 21%, from Bulgaria to 16% and from Croatia to 13%.

Country of origin	2014	2015	2016	2017	2018

Table 9: EU emigrants (below 20 years): Known numbers hosted in EU21²⁷

Germany has by far the highest increase in numbers of immigrating children from other EU Member States. Figures of relevant migrant stocks almost doubled from 2014 to 2018 in the age groups below 10 years. In fact, the Bundesamt für Migration und Asyl reported for 2017 that immigration from within the EU constituted 2/3 of the total immigration to

²⁷Without figures from Greece, France, Croatia, Cyprus, Malta, Poland, and United Kingdom (as host country). The last column contains (speculative) proportional extrapolations with respect to the known total number of intra-EU migrants in the age group 0-19.

Germany²⁸. This is mainly due to increased immigration from Romania, Bulgaria, Poland, Croatia and Hungary.

The highest rate in children from other EU Member States remains with **Luxembourg** (more than 40% in the age groups below 15 years). The country also has a high rate of third country nationals (7,7% for the age group below 20). Surprisingly, the largest EU nationality is not a neighboring country but Portugal (44%), followed by France (19%). On the other hand, Luxembourg hosts some European institutions with staff members from across Europe, including their children.

The same applies for **Belgium** that also a high rate of children from other Member States. The rate of 6,7% (of persons below 20) is not as high as in Luxembourg or Austria, but still higher than the rate of third country nationals of the same age group (4,3%). Apart from large shares from neighboring countries Netherlands, France and Germany, there are also very large groups from Romania, Poland, Bulgaria, Italy, Spain and Portugal.

Austria has the third highest rate of children from other EU states (7,6% of persons below 20). More than 90% of these come from Germany (21%), Romania (20%), Croatia (11%), Hungary (11%), Poland (9%), Slovakia (7%), Bulgaria (5%), Italy (3,5%), Slovenia (3,3%), and Czechia (1,9%).

United Kingdom had an overall share of EU migrants of 5,4% in the age group 0-19 in the year 2018. For **Cyprus**, this share is almost 9,5% and the highest in the EU after that of Luxembourg. However, information about the composition within that group is missing for both countries.

40% of EU migrants in **Spain** arrive from Romania (age group below 20). The list is followed by Italy (10%), Bulgaria and United Kingdom (around 8% each). The total rate of EU migrants in the age group 0-19 is 2,9%.

In **Ireland**, the largest share of EU migrants comes from Poland (almost 39%), followed by United Kingdom (14,5%), Lithuania (12,3%), Romania (7,6%) and Latvia (7%). The total share of EU migrants aged 0-19 is 5,4%.

2.3 Particular Findings

2.3.1 High influx of 2015-2016

The peaks in 2015 and 2016 cannot only be explained by the high number of refugees from Syria, following the military conflict there. **Syrian children** account for 29% in 2015 and 35% in 2016 of all migrant children, thus forming by far the largest group. However, also the figures of children from the conflict zones in **Afghanistan and Iraq** and from **the Balkans** increased dramatically in 2015 (Figure 5). Children from those regions were apparently following the main path of the Syrian refugees via the Balkan route.

In section 2.1.1 it was already mentioned that the numbers of asylum applications per capita are extremely different in each Member State. With respect to required reception capacities, it is interesting to add that the second ranked Hungary (for 2015) is at only roughly 40% of the average GDP per capita in Europe. This made the reception of some 45.000 children in 2015 particularly challenging.

But not only the economic situation creates challenges. When looking at the composition of the migrant children in age groups, the group of 16-17 years old unaccompanied children is dominating as of 2015 (Figure 3). If compared to the number of persons of the same age group in the host country, the relations of Table 2 become even more critical for the top 4 countries (Sweden, Hungary, Austria, Germany). Sweden received almost 90 child migrants per 1000 inhabitants of the same age group in 2015 (or roughly

²⁸ <http://www.bamf.de/EN/Startseite/startseite-node.html>

1 out of 11) as can be seen from Figure 6. Such a relation is likely to create an enormous integration challenge.

Figure 5: Major regions of countries of origin of asylum seeking children

Also, Austria and Hungary reached in 2015 a relation of 1 out of 33 and 1 out of 50, resp., for this group of 16-17 years old, with Hungary only at one third of Austria's GDP per capita (Figure 6).

Such comparisons further urge for new policies that better balance among Member States the burden in support and protection of migrant children. Otherwise, Member States may react at national level in a way that could worsen the situation for migrant children as reported by UNICEF (see introduction).

Figure 6: Number of asylum seeking children of age 16-17 per 1000 persons of same age group

2.3.2 Differences regarding receiving countries

There are stark differences with respect to the structure of migrant population in the receiving countries of asylum seekers. In contrast to Figure 5, **Italy** experienced by far more child migrants from Africa than the EU average. Due to the continuous migration flow via the Mediterranean Sea (at least until 2017), Italy also saw an increase towards 2017 in numbers rather than a decline after the peak of 2015/16 (Table 10 and Figure 7). However, the figures for 2018 constitute a dramatic decline that started already end of 2017 and even more in mid 2018.

	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018

Table 10: Top 10 countries of origin of child asylum seekers in Italy

Figure 7: Top 10 countries of origin of child asylum seekers in Italy

The list of countries of origin is led by Nigeria, followed by Gambia. Bangladesh and Syria are the only non-African countries in the top 10.

Similar trends as for Italy apply to Greece and Spain, for the latter at clearly lower level of absolute numbers until 2017.

The migration profile for **Germany**, with the largest share of child migrants, looks completely different. Because of its high share, Germany more or less reflects the trends from Figure 5. For 2016, the list is led by Syria, Afghanistan and Iraq (Table 11). The African countries Eritrea, Nigeria and Somalia have much smaller shares than those top 3 countries but the share is in absolute values still higher than those from Italy in Table 10. After the peak in 2016, the figures declined dramatically (Figure 8). It is interesting to note that more than half of these applications are from children below the age of 4.²⁹

	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018

Table 11: Top 10 countries of origin of child asylum seekers in Germany

Figure 8: Top 10 countries of origin of child asylum seekers in Germany

The migration profile for **France** follows partially the trend of Italy, but with quite different composition of nationalities. The list of top 15 countries (Figure 9) is led by Albania, Georgia and Côte d'Ivoire. One fourth of all children in the period displayed in Table 12 came from those three countries.

In all, the composition of nationalities is much wider spread than for Italy and Germany, with less strong increase towards 2015 but with strong increase (against the trend) in 2017 and 2018. Figures between 2009 and 2018 grew by a factor of 2,5. Earlier in the

²⁹ http://www.bamf.de/SharedDocs/Anlagen/DE/Downloads/Infothek/Statistik/Asyl/aktuelle-zahlen-zu-asyl-november-2018.pdf?__blob=publicationFile

last decade, there have been high numbers of Russian children, but numbers declined afterwards. The same applies to the Kosovo.

	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018

Table 12: Top 15 countries of origin of child asylum seekers in France³⁰

Figure 9: Top 20 countries of origin of child asylum seekers in France

Syria accounts since 2013 for an increasing number of asylum applications. However, their order of magnitude were even in 2018 at 4% of the numbers in Germany.

³⁰ Figures for 2008 not available

Still in 2018, about one third of all asylum seeking children came from a large number of other countries outside the displayed top 15, many of them having French as official language.

In other Member States with high numbers of asylum applications, the number of countries of origin from where most of the applicants arrived is much smaller.

In contrast to all other Member States, **Spain** received also asylum applications from Latin America. In 2018, more than one third of asylum applications of children came from Venezuela. From Colombia, El Salvador and Honduras the share was altogether 24%. Most of the other children arrived from Syria (11%) and from Ukraine (5%).

Greece had a significant incline in numbers of asylum applications only as of 2016. In 2018, these applications have still been filed mostly by children from Syria (29%), Iraq (20%), Afghanistan (23%). Since 2017, there is also a strong increase in numbers from Turkey (8% in 2018).

Sweden received in 2015, at the peak of the migration, 84% of all asylum seeking children from only 5 countries. The majority came from Afghanistan (43%) and Syria (25%), followed at much smaller level by Iraq (8%), Somalia (4%) and Eritrea (4%). Since 2016, Sweden is back to numbers of asylum applications lower than those before 2010.

2.3.3 High rates in age group 15-19 years

There are two particular phenomena in the age group 15-19 years, even though limited to a few countries of origin. First, the share of migrants within the relevant home country population is relatively high. Second, there are nationalities for which the share of male migrants is much higher than of females.

The following figures are estimates based on the reported migrant stocks per country of origin and the UN Population Statistics³¹. Table 13 displays the share of young males and females (aged 15-19) that have left their country towards EU21³². For the red shaded countries Gambia, Syria, Eritrea and Afghanistan, the share of females in the same age group is much lower (up to 10 times lower as in the case of Gambia).

Country of Origin	share of emigrants towards EU in age group 15-19	
	males	females
Albania	11,79%	10,09%
Macedonia	10,25%	9,65%
Kosovo	9,83%	8,60%
Bosnia and Herzegovina	7,50%	7,01%
Gambia	7,56%	0,77%
Syria	4,93%	2,84%
Cabo Verde	4,42%	4,75%
Eritrea	3,99%	1,68%
Serbia	3,63%	3,87%
Afghanistan	2,44%	0,55%
Morocco	2,21%	1,92%

Table 13: Share of male emigrants towards EU21³² (2018, age group 15-19 years)

³¹ <https://population.un.org/wpp/>

³² The 21 Member States (mentioned earlier) for which detailed information on countries of origin is available.

As mentioned in section 2.2.1, the missing data from some Member States could increase these percentages by approximately 30% to cover the whole EU28.

Table 13 shows that the Balkan countries Albania, North Macedonia, Serbia, Kosovo, Bosnia and Herzegovina have lost significant shares of the mentioned demographic groups³³.

Other countries of origin with much higher shares of males than females are Guinea, Bangladesh, Senegal, Egypt, Somalia, Pakistan, India, Iraq, Iran and Tunisia. The share of males in the age group 15-19 is between 30% (Tunisia) and 500% (Guinea) higher than that of females.

On the other hand, the age group of 15-19 years is also the group in which the actual age of a person might be in doubt, at least in cases where reliable identity documents could not be provided. Potentially the available figures are to some extent an overestimation because persons aged 20 and higher might have been included on wrong basis (see Annex 5 for more information on this phenomenon).

2.3.4 Unaccompanied and undocumented children

Even though the numbers of unaccompanied asylum seeking children have declined, both in absolute figures and in percentage of all asylum seeking children (Figure 3), the accumulated numbers of applications in the EU are still enormous and a matter of concern. However, it is obvious that the case handling of unaccompanied children (either asylum seeking or not) are treated differently in the Member States. In any case, even the smaller figures for 2018 of unaccompanied children (19.750 applications or 10% of all asylum applications of children) are still higher than those in years before 2014.

There is also a difference between “unaccompanied” and “undocumented”. A child may arrive unaccompanied but with valid identity documents. On the contrary, even accompanied children may have no reliable documents. In cases without documents, name and date of birth might not be determined but the immigration authorities could still determine the country in an indirect way. In fact, only a few cases were reported where it was impossible to assign a country of origin to an unaccompanied child asylum seeker (in average less than 1% over the past ten years). Also, the number of unaccompanied children that have been assigned the status “stateless” is small (maximum of 2% in 2013/14, only 0,2% in 2018).

This observation goes in line with the relatively small numbers of migrant children stocks in the EU that are either of “unknown origin” or “stateless”. High percentages of persons aged 0-19 and of “unknown citizenship” is reported for 2018 only by The Netherlands (12%), Belgium (8%), Austria (5%) and Sweden (4%). Europe-wide this adds up to some 50.000 children. The number of stateless children was approximately half of it in 2018.

Unfortunately, it is not known on which basis the country of origin has been determined in all these cases. The fact that only a few Member States report such cases suggests that different national policies are applied.

In all, there is still no reason for waiving the concerns that have led to particular European support activities, namely the “Action Plan on Unaccompanied Minors” (2010)³⁴ and the Communication on “The protection of children in migration” (2017)³⁵. However, more detailed information would be necessary to understand the progress of status determination of individuals in this particular situations.

³³ EU accession negotiations have already started for Serbia and will start for Albania and Macedonia end of 2019. Bosnia and Herzegovina filed an accession application in 2015.

³⁴ COM(2010) 213 final

³⁵ COM(2017) 211 final of 12.04.2017

2.3.5 Trends as of 2019

The overall trend after 2016 is clearly towards lower but relatively stable numbers of new migrants. This trend continues in 2019 which is best reflected in the well-documented numbers of first asylum applications in the Member States (Figure 10).

Figure 10: Monthly first time asylum applications of **children** in the EU28 since 2013

The trend for the first months of 2019 follows almost exactly the one for 2018. This is slightly different as for the trend on adults (Figure 11) where the 2019 figures are slightly higher than those in 2018.

Looking at the top 8 receiving Member States since 2017, the trend for 2019 shows only two new trends, despite overall declining numbers (Figure 12): Spain has received in the first three months of 2019 as many asylum applications than in the whole year 2017. For Sweden, the numbers are almost equal per month. For Austria figures dropped by 50%, and for Italy by 70%.

Figure 11: Monthly first time asylum applications of **adults** in the EU28 since 2013

Figure 12: Monthly asylum applications of children 04/2017-03/2019

2.3.6 Missing data related to Children in Migration

Apart from already available data, there are areas for which more specific information would be desirable that will be the **subject of the second report**:

- Detailed disaggregated information on **migrant stocks** are not available from Greece, France, Croatia, Cyprus, Malta, Poland, and United Kingdom. This accounts to a share of up to 40% of migrants in Europe, including intra-EU migration. It is therefore desirable to close this gap by obtaining relevant data from those Member States.
- Unlike EU migrant children, the **status of third country nationals** is often unclear, at least regarding longer term prospects. Anonymised data, regardless how regularly reported, does not tell anything about the development of status of individuals. On the other hand, the prospects on remaining in a certain country has an impact on developing proper support policies, beyond anything that can be summarised as “emergency treatment”. Of particular interest would be:
 - *Data on duration and results of administrative procedures for status determination*, including but not limited to asylum applications.
 - *Share of children with residence permits*: some data exists from EUROSTAT on residence permits but without relation to overall numbers of third country nationals
 - *Longitudinal data on residence, including translocation within Europe*: what type of storylines can be found for child migrants and at which frequency. Again, some data on emigration of third country nationals exists but without specification of target country.
- Even though the report identifies already accumulations of certain nationalities of third country nationals in individual Member States, such facts do not necessarily identify real larger **communities of migrants**. Such statements would only be possible if relevant **local data** would be available across Europe. “Local” could mean

at least at regional level, but preferably in units comprising of 0,5 to 1 million persons. The benefit of such data would be to facilitate better cooperation of host communities with regard to integration of certain migrant groups [9]. It could also help to better predict translocation of migrants within Europe.

- **Age assessment** is a key issue, both with respect to reliable figures on children and with respect to avoid any kind of arbitrariness in the reception of children (see Annex 4). Figures about the application and the results of age assessments in the Member States could help to better understand the reliability of age group assignment and to improve the mutual recognition of assessment results. EASO, in its 2018 “Practical Guide on Age Assessment” [7], confirmed the existence of a wide spectrum of age assessment methodologies used in Member States. JRC put a particular focus on medical age assessment also in 2018 [8]. More detailed data on age assessment practices could facilitate the identification and promotion of better and fairer practices regarding age assessment.
- Even though **detention of migrant children** is considered to contradict the best interests of the child principle, it is still applied in a number of European Member States [10]. An ongoing UN “Global Study on Children deprived of Liberty”³⁶ is collecting world-wide figures on this phenomenon and will present its report in autumn 2019. The report will in particular focus on existing practices that avoid any form of detention for children, even in the case when they are going to be returned with the parents.

Annex 1: KCMD Data Collection on Children in Migration

Overview

The Knowledge Centre on Migration and Demography (KCMD) is a European Commission initiative on better knowledge management for sound EU policy making. To strengthen the Commission's overall response to the opportunities and challenges related to migration, the KCMD aims to be the point of reference to support the work of Commission services and Member States on migration and related issues. It shall allow for analytical and networking activities accompanied by a repository of relevant research and new initiatives to deepen knowledge and understanding.

KCMD maintains a Knowledge Portal for migration related data and information that can be accessed at:

<https://bluehub.jrc.ec.europa.eu/portal/>

Figure 13: KCMD Knowledge Portal

The Knowledge Portal was created to establish a single point of entry to knowledge relevant to EU policies on migration and related fields. From the landing page in Figure 13, the following services can be consulted:

- **The Data Catalogue** that allows discovering and usage of data sources relevant to migration, demography and related policies
- **The Information Catalogue** that allows to explore other web portals, stakeholders, networks and projects relevant to EU policies on migration and related fields
- **The Data Hub** that provides interactive mapping and direct access to selected datasets relevant to migration

Information and Data Catalogues

The Data Catalogue is a metadata catalogue to enable any user to discover data sources relevant to migration, demography and related fields. Each data source is listed with its summary description, the link to its web site and other metadata. The catalogue includes official EU and international statistics, as well as selected data sets at EU Member State level.

The Information Catalogue is a catalogue to enable any user to discover web portals and platforms, stakeholder organisations, networks and forums as well as projects and Commission activities relevant to EU policies on migration and related fields. It draws on a wide range of existing information sources.

Both catalogues (that also have a significant overlap) have a particular section on "Children in Migration", accessible through the start page of each catalogue (Figure 14 and Figure 15).

Amongst others the following items can be found in the children related section:

- EUROSTAT datasets on **asylum applications**, first time applicants, including unaccompanied Children
- EUROSTAT **Dublin statistics** that contain information based on Article 4.4 of the Council Regulation 862/2007 with reference to
 - The number of requests for taking back or taking charge of an asylum seeker.
 - The provisions on which the requests for taking back or taking charge are based.
 - The decisions taken in response to the requests for taking back or taking charge.
 - The numbers of transfers to which the decisions taken in response to the requests for taking back or taking charge lead.
- EUROSTAT datasets on **residence permits** issued for third country nationals in the EU and EFTA countries.
- EUROSTAT datasets on **decisions on asylum applications and resettlement** contain statistical information based on Article 4 of the Council Regulation (EC) no 862/2007 with reference to:
 - First instance decisions by age, sex and citizenship
 - Final decisions by age, sex and citizenship
 - Decisions withdrawing status granted at first instance by type of status withdrawn and by citizenship
 - Decisions withdrawing status granted as final decisions by type of status withdrawn and by citizenship
 - Resettled persons by age, sex and citizenship
- **UNHCR Refugees Operational Data Portal** providing refugee situations over 69 countries. Currently there are 15 active situation views, from which 3 "featured":

Syria Regional Refugee Response, Refugees/Migrants Emergency Response Mediterranean, and Mozambique situation.

- **IOM-UNHCR-UNICEF Interagency Factsheet on Refugee and Migrant Children** (including unaccompanied and separated children) compiles available data on children on the move in Europe. It provides overview of trends (quarterly and annual) in regards to overall arrivals to Europe, number of asylum claims, relocations, nationality breakdown of children, information about accompanied and unaccompanied and separated children, protection concerns, reception conditions.

More datasets and other related information can be found directly in the Portal.

The user interface also provides an online tutorial that should facilitate quick acquaintance with the tool.

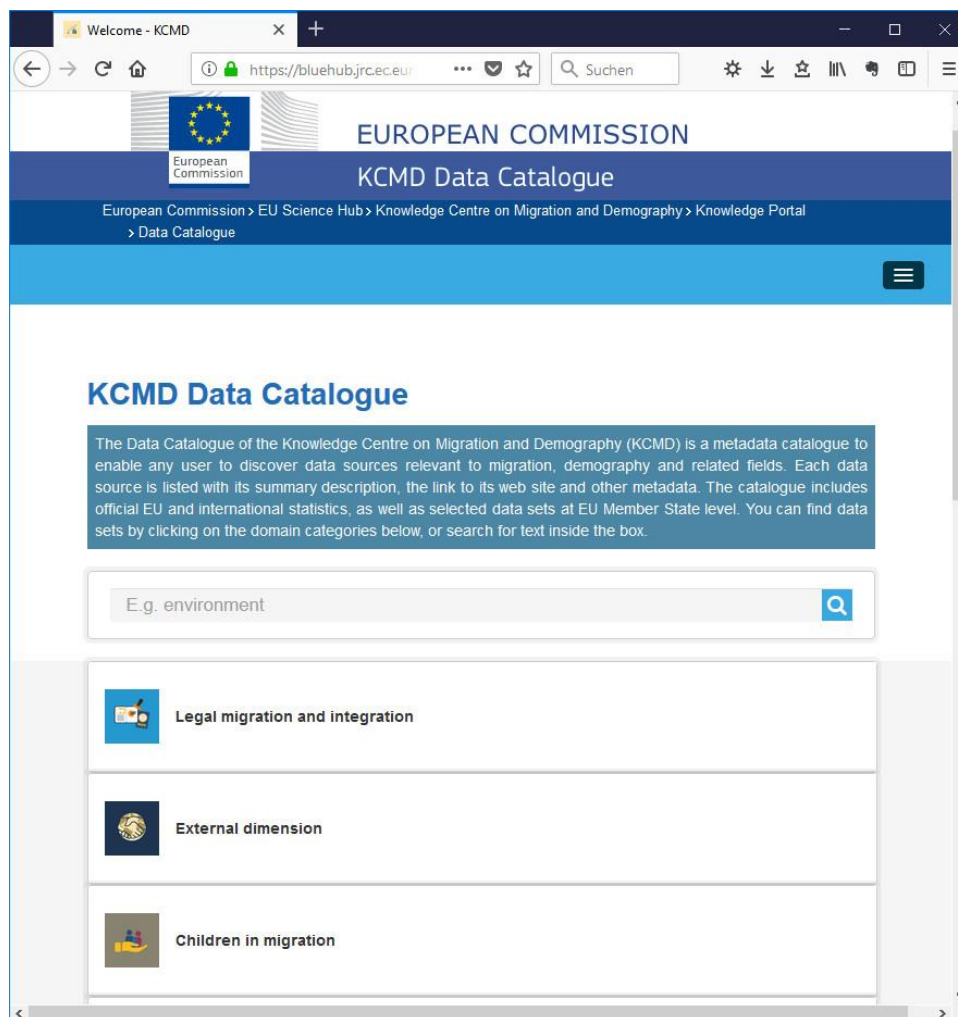

Figure 14: KCMD Data Catalogue main page

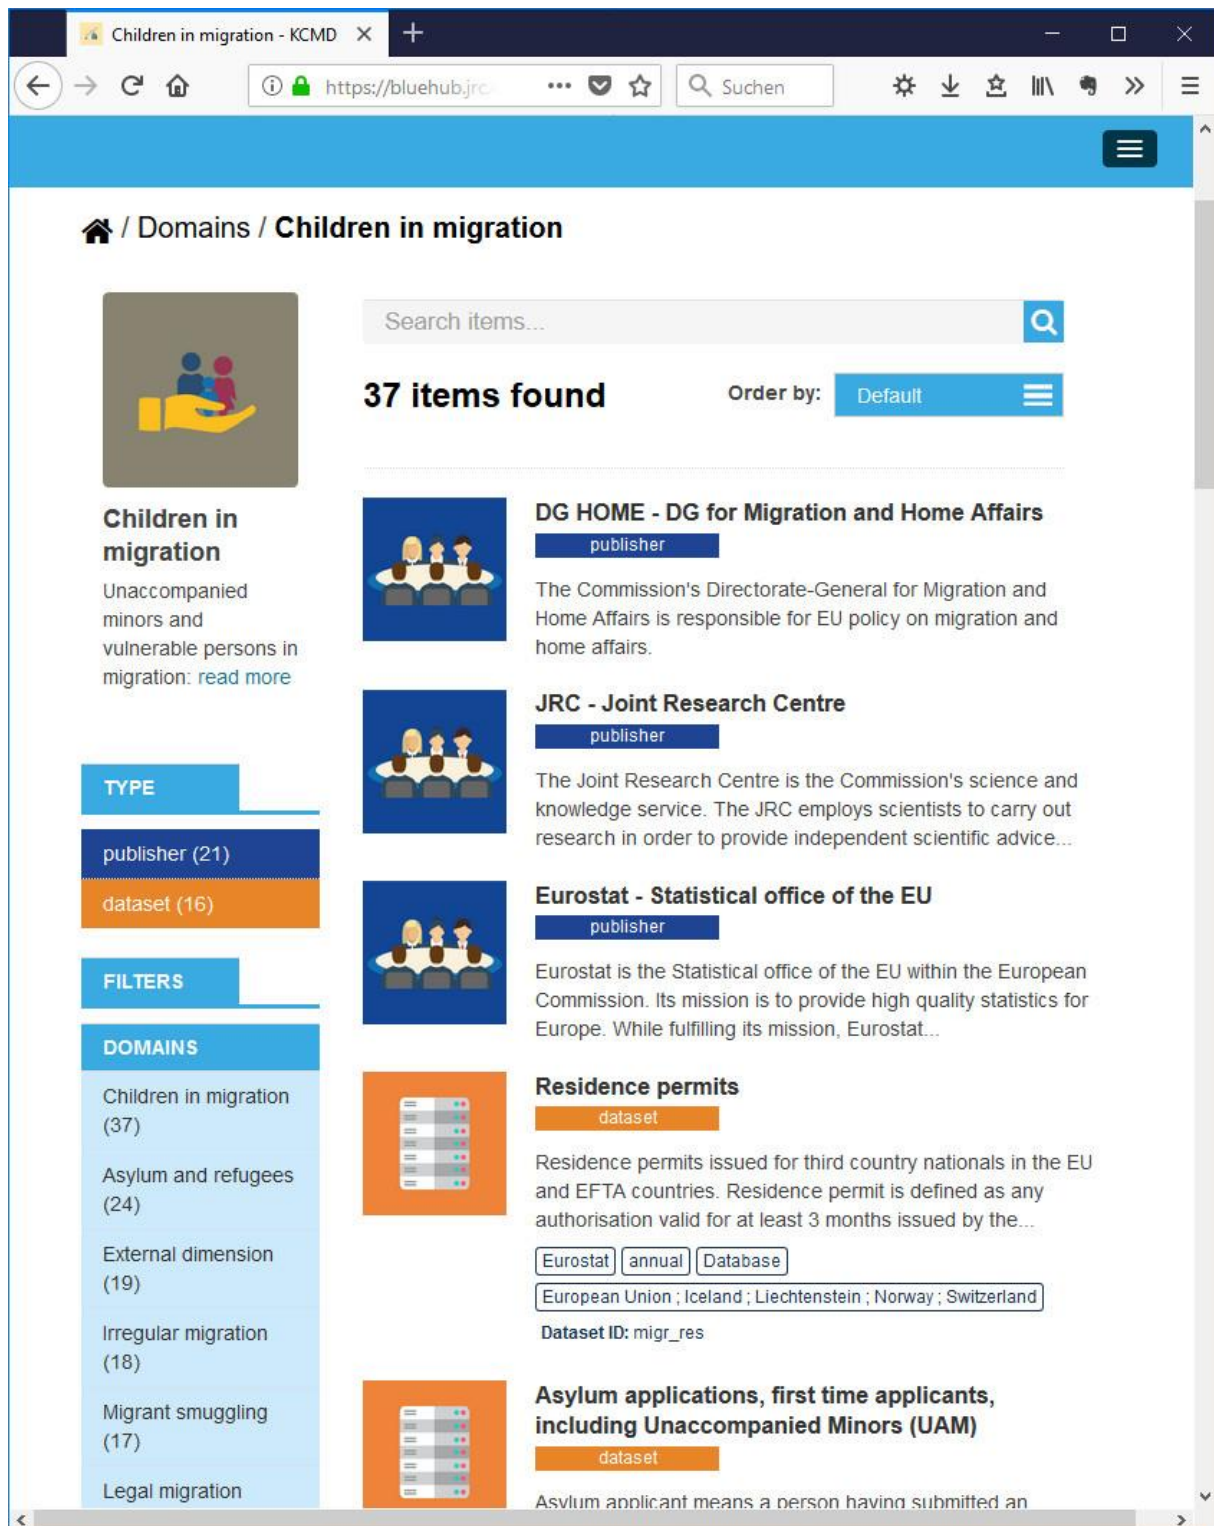

Figure 15: KCMD Data Catalogue on Children in Migration

The Dynamic Data Hub

Through interactive mapping, the Dynamic Data Hub gives direct access to single datasets in order to visualise migration and demography data and trends. It should help to quickly understand certain statistics without browsing through large data tables.

By selecting “children” on the left (Figure 16), particular children related data can be visualised.

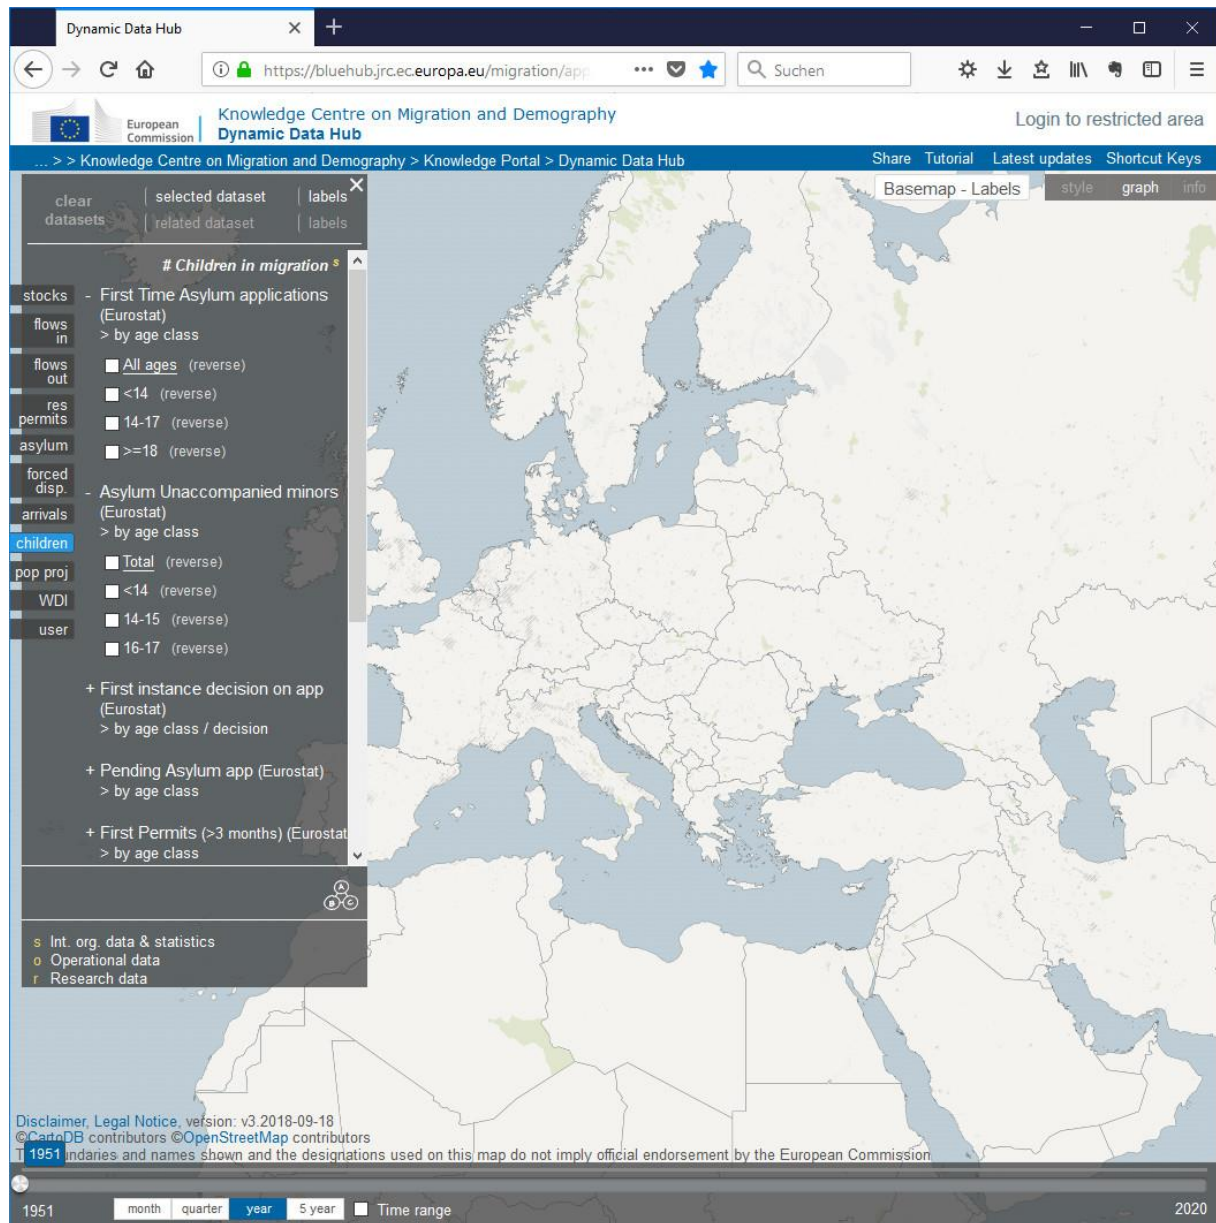

Figure 16: DataHub on Children in Migration

From there a number of datasets (as explained before) can be accessed. For example, Figure 17 shows a query of EUROSTAT data on asylum applications of unaccompanied children in the age group 16-17 years. In the bottom slider bar, the reference date (year, quarter or month) can be selected. As a result, the number of applications appear in the map for each country individually.

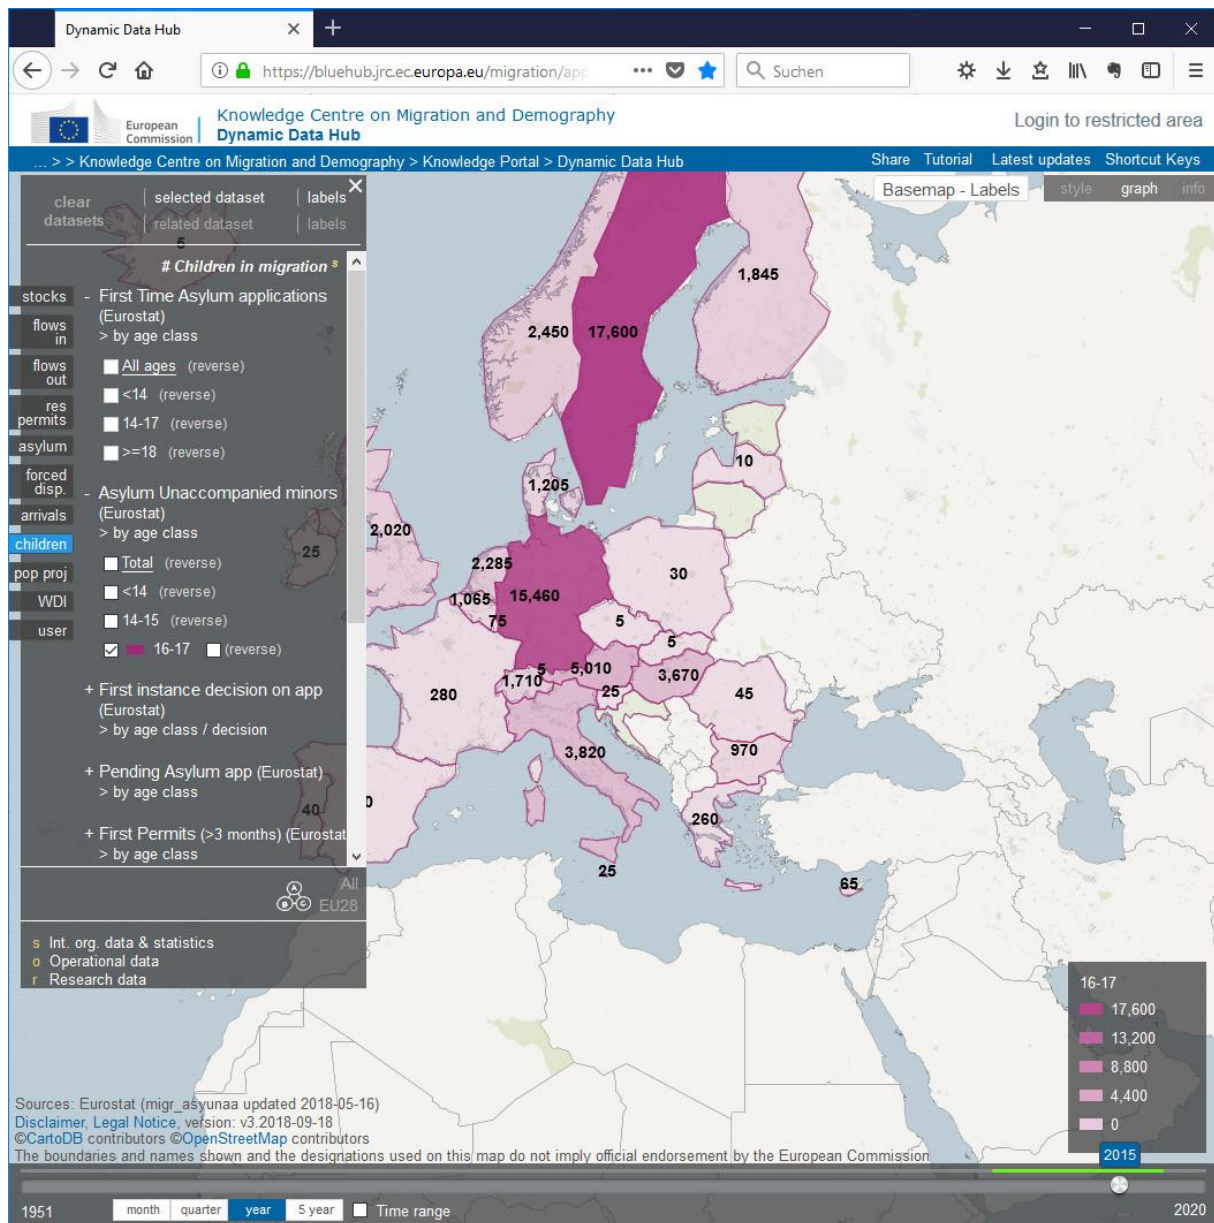

Figure 17: Example query on unaccompanied children aged 16-17: registered asylum applications

Furthermore, by selecting additionally the “reverse” button, the countries of origin and the number of individuals of the selected group of asylum seeking children from those countries appear (Figure 18). When sliding the mouse over a selected country of origin, the Member States concerned with asylum applications from those nationals appear in the right upper corner, with indication on the numbers.

Online Country Profiles and Statistics

All country profiles that can be found in Annex 2 are also accessible via internet at the following URLs:

https://visualise.jrc.ec.europa.eu/t/migr/views/Childrensinmigration/21countries_A?iframeSizedToWindow=true&:embed=y&:showAppBanner=false&:display_count=no&:showVizHome=no

or

<https://tinyurl.com/y5ktowcf>

See Figure 19 as an example.

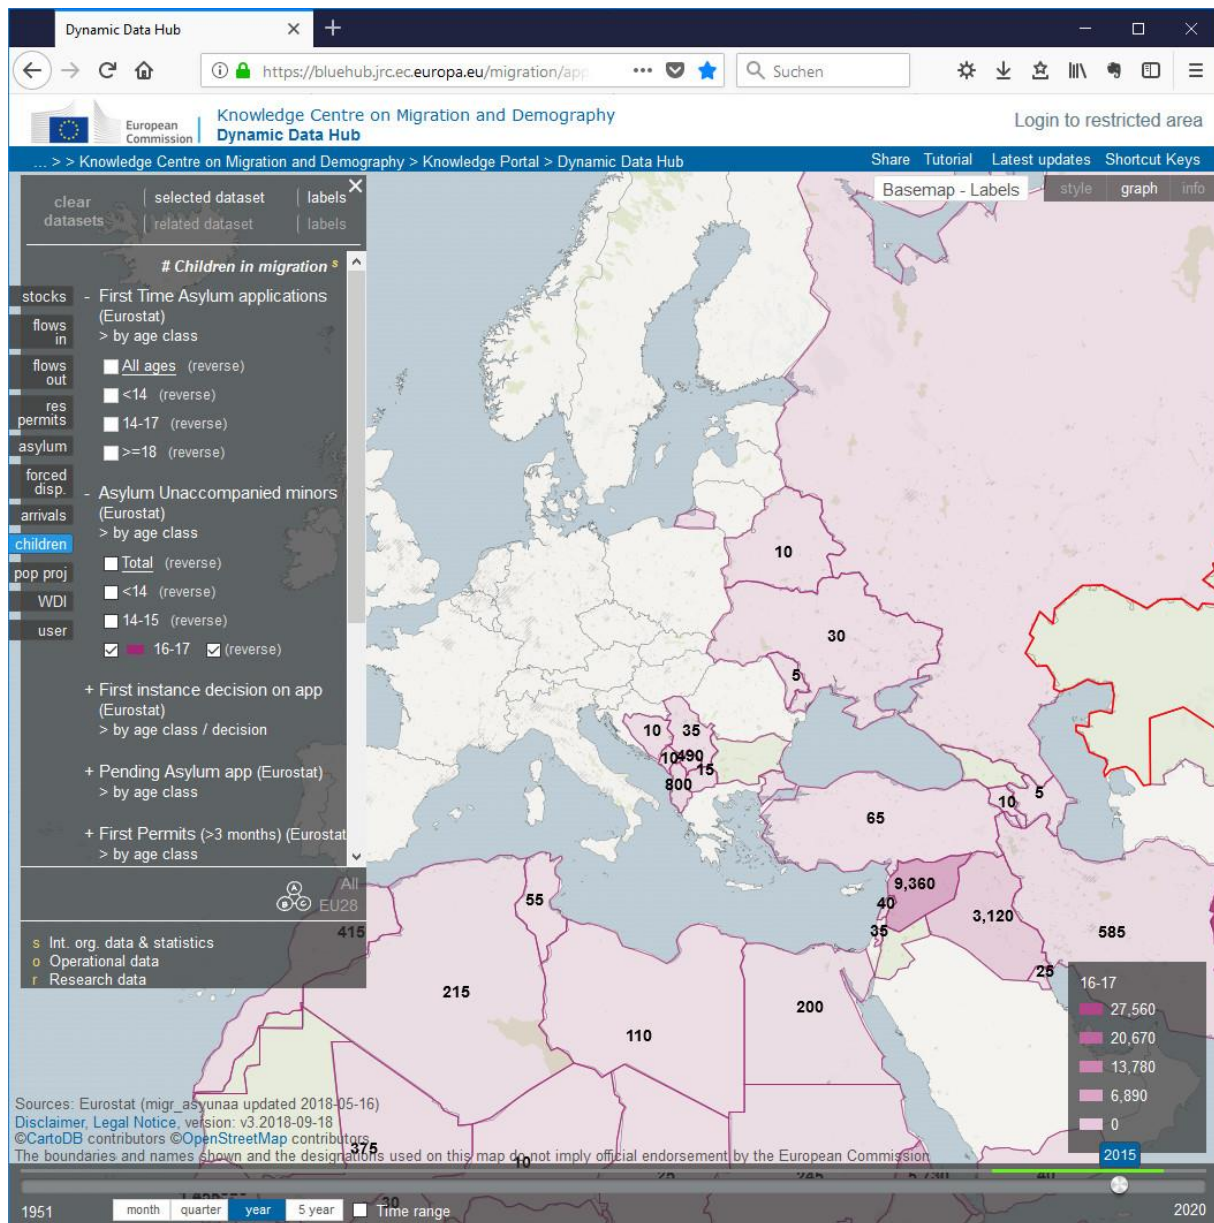

Figure 18: Example query on unaccompanied children aged 16-17: countries of origin

With respect to country of origins, the profiles display only the most important data. The full data can be found under the additional URLs:

https://visualise.jrc.ec.europa.eu/t/migr/views/Childrens_Tables_2018/AbsoluteNumber?iframeSizedToWindow=true&:embed=y&:showAppBanner=false&:display_count=no&:showVizHome=no

or

<https://tinyurl.com/y3pyyupk>

Figure 20 shows an example query for the children data of Austria. Both online Portals have comprehensive download options.

Annex 2: Country Profiles

The following pages display the composition of third country nationals and EU nationals aged 0-19 years according to their country of origin. Reduced information only is available for the following Member States: Greece, France, Croatia, Cyprus, Malta, Poland and the United Kingdom.

For a complete overview on how many migrants aged 0-19 live in which Member States, refer to Annex 4.

As explained in section Annex 1, all data is also available online at

<https://tinyurl.com/y5ktowcf>

and

<https://tinyurl.com/y3pyyupk>,

respectively.

Some further hints for using the info pages:

- "Children+" is used as an abbreviation for persons of the age group 0-19.
- The list of Top 10 countries of origin is built from the 2018 data. This might cause confusion sometimes if the order was significantly different in years before.
- The country profiles usually cover the period from 2015-2018. If less years are displayed, then for the missing years no data was available.
- In some of the bar charts, the percentages are not displayed because of too less space. However, the online version of the profiles allow to display any missing detail.
- The categories "Stateless" or "Unknown" are usually assigned by the receiving country and might follow different national policies regarding immigration control.
- The figures reported for a given year are meant for the 1 January.
- Data on asylum applications and stocks with respect to "country of origin" are based on acclaimed "citizenship" and not on "country of birth".

Table 21: Countries of origin and number of migrants in 21 Member States (part 5)

Annex 5: Age Assessment

An important aspect of the reception of unaccompanied children is the question of their age. In fact, as these young people frequently arrive without reliable documents, their age might be called into question. This has an impact also on the reliability of related statistics that disaggregate with respect to age. Can we thus trust these statistics, in particular with relatively high numbers of unaccompanied children in age groups 16-18 (cf. Figure 3)?

Determination of age is above all of great importance for the individual in question as there is a significant difference in conditions for the reception of persons below or above 18 years of age. Regardless of the potential granting of international protection, minority status guarantees a wide range of rights and legal safeguards in accordance with the UN Convention of the Rights of the Child (CRC) and the Common European Asylum System (CEAS).

This fact puts into focus **age assessment**, the attempt by authorities to estimate the (chronological) age of a person, in the absence of reliable documentation regarding age. As there is no such simple technique for humans as counting the age rings of trees, any existing age assessment approach is subject to discussions and possibly even disagreements.

Ultimately, however, the 18 years mark remains the baseline for the application of relevant international legislation as, for example, stated in the last recast of the Qualification Regulation: *'minor' means a third-country national or stateless person below the age of 18 years.*³⁷ If protection of children is of overriding importance, then the risk of their false categorisation as adults needs to be reduced to an absolute minimum.

In the "Practical Guide" [7], EASO categorises age assessment methods according to their level of intrusiveness, "intrusiveness" being measured in terms of health and ethical impacts. Priority should be given to the least intrusive methods, before other methods can be used if age is still in doubt.

Medical methods are usually the ones considered as more problematical for a number of reasons. Probably the most important class of medical methods are those based on the **observation of age markers**, i.e. somatic indicators that change in a given way with age. As a large number of scientific studies has investigated this relationship in detail, it is assumed that this method allows for reliable and reproducible conclusion about the true age of a person.

This ambitious claim is not unchallenged. In addition to doubts about the real precision of medical methods, there are also health and ethical issues. On the other hand, the high potential to establish age estimation on objective criteria, thereby reducing the dependence on individual expert opinion, has raised high expectations and attention on age markers.

The KCMD has just published the results of its own investigations in this respect [8]. The report entitled "Medical Age Assessment of Juvenile Migrants – An Analysis of Age Markers-Based Assessment Criteria aimed to analyse to what extent the expectations towards medical methods can be met.

Basically, there is the **risk of false categorisation of children into adults** that threatens the protection of the fundamental rights of children. The report places this risk (and other risks that are identified in the report) at the centre of consideration and analyses the issues with respect to these risks.

What are these issues? As said before, a number of physiological indicators (the age markers) have been identified by scientists that correlate well with a person's age; to be more precise, they correlate with **age ranges**. These ranges have been quantified in numerous studies, done with different focuses and study populations.

Figure 21 shows as an example the main phases of clavicle bone ossification in which a small piece of bone fuses with a neighbouring bone (upper row: schematic view, lower

³⁷ COM(2016) 466 final, Qualification Regulation, Art. 2,10.

row: real images). In phase 1, the smaller bone does not exist yet. Phase 2 shows the appearance of the smaller bone, phase 3 sees them fused together (but still distinguishable). In phase 4, the two bones are merged, with only the seam visible. Finally, in phase 5 the two bones have merged into one, seamless bone.

Figure 21: Example Age Marker: main phases of clavicle ossification³⁸

In reviewing the relevant studies on various age markers, the KCMD researchers concluded the following:

- The knowledge about age markers is spread over a wide range of scientific publications, with no single point of access. Thus, age estimation by competent experts may not involve all available information and may be based instead on an individual expert's selection of these publications, and therefore not on the best available knowledge as a whole.
- The reporting of age ranges (rather than fixed estimates like "16,4" or "19,5") is frequently interpreted as "statistical uncertainty". This has led to the practice of providing a "most likely age" based on sometimes questionable statistical reasoning. This practice of using averages instead of ranges is the main source of criticism about age markers. In fact, such an interpretation can have far-reaching negative consequences for children.
- Age markers are observed by medical imaging devices that in most cases involve X-Rays. Though less critical imaging techniques exist, the dominant part of existing scientific records is X-Ray-based. This creates a health issue.

However, these issues do not necessarily create unresolvable obstacles for the practical application of age marker-based assessment. The report [8] also found that:

- There exist reliable practices in Europe that do take due account of the information available for the different age ranges. These practices use the lack of detail below the level of the "age range" (the impossibility to fix the exact age) always in favour of the person in question.
- Insufficient significance of one single age marker can be compensated through the combined use of several age markers. Again, the information combined needs to be used in a responsible and cautious manner to avoid misinterpretation.
- A number of already identified studies could help to validate the underlying set of data and relax the dependency on X-Ray images. This can further improve the authenticity of the conclusion and reduce the potential health risks.

In summary, by managing the identified risks properly, age marker-based assessment could provide a child-safe, human rights compliant, and scientifically-sound.

The findings of the KCMD report had been synthesized into a proposal towards the establishment of a **child-safe age marker medical assessment scheme**, with special focus of the European context. The main pillars of the proposal are

- The establishment of a comprehensive, scientifically sound and agreed **Catalogue of Age Markers**. This catalogue would provide for each age marker the reference images and the corresponding data about observed age ranges.
- The development of an **Age Marker Assessment Protocol** (Figure 22) that describes how from a set of images on the status of the age markers a decision shall be inferred about whether minority or majority can be excluded without reasonable doubt.

Age Marker Assessment Protocol	
1.	Provide an anamnesis of the person in question and make sure the person does not suffer from any serious disease. Otherwise, STOP age assessment.
2.	Start acquiring images for all age markers that do not require computed tomography imaging.
3.	Assign for all acquired images of age markers the corresponding phase according to the Catalogue of Age Markers. If there is doubt between two phases, choose the lower one.
4.	Make sure that any abnormality can be excluded. Otherwise, STOP further age assessment
5.	Look up in the Catalogue for each identified phase the minimum and maximum value (the latter may not exist)
6.	Take from all minimum values the largest value and denote it with MIN
7.	Take from all max. values the smallest value and denote it with MAX
8.	Repeat steps 3. – 7. with another independent examiner. If MIN and MAX are the same for both examiner, continue with these values. Otherwise, involve a third examiner and use voting.
9.	Result: The person is at least MIN years old and at most MAX years without reasonable doubt.
10.	Report: if MIN is below 18, minority cannot be excluded; if MIN is above 18, minority can be excluded; if MAX is below 18, majority can be excluded; indicative age: MIN years
11.	If neither majority nor minority can be safely excluded, acquire images of those age markers that require CT and continue with steps 3.-10.

Figure 22: Age Marker Assessment Protocol

- The establishment of an **Age Marker Diagnostics Centre** that can host a number of permanently available experts in the age diagnostics of juveniles. Such a cost saving centralised service would guarantee full availability of relevant expertise and would facilitate a uniform application of the Catalogue of Age Markers and the Age Marker Assessment Protocol.

GETTING IN TOUCH WITH THE EU

In person

All over the European Union there are hundreds of Europe Direct information centres. You can find the address of the centre nearest you at: <http://europa.eu/contact>

On the phone or by email

Europe Direct is a service that answers your questions about the European Union. You can contact this service:

- by freephone: 00 800 6 7 8 9 10 11 (certain operators may charge for these calls),
- at the following standard number: +32 22999696, or
- by electronic mail via: <http://europa.eu/contact>

FINDING INFORMATION ABOUT THE EU

Online

Information about the European Union in all the official languages of the EU is available on the Europa website at: <http://europa.eu>

EU publications

You can download or order free and priced EU publications from EU Bookshop at: <http://bookshop.europa.eu>. Multiple copies of free publications may be obtained by contacting Europe Direct or your local information centre (see <http://europa.eu/contact>).

JRC Mission

As the science and knowledge service of the European Commission, the Joint Research Centre's mission is to support EU policies with independent evidence throughout the whole policy cycle.
