The mission of the IHCP is to provide scientific support to the development and implementation of EU policies related to health and consumer protection. The IHCP carries out research to improve the understanding of potential health risks posed by chemical, physical and biological agents from various sources to which consumers are exposed.

The Toxicology and Chemical Substances Unit (TCS), commonly known as the European Chemicals Bureau (ECB), provides scientific and technical input and know-how to the conception, development, implementation and monitoring of EU policies on dangerous chemicals including the co-ordination of EU Risk Assessments. The aim of the legislative activity of the ECB is to ensure a high level of protection for workers, consumers and the environment against dangerous chemicals and to ensure the efficient functioning of the internal market on chemicals under the current Community legislation. It plays a major role in the implementation of REACH through development of technical guidance for industry and new chemicals agency and tools for chemical dossier registration (IUCLID5). The TCS Unit ensures the development of methodologies and software tools to support a systematic and harmonised assessment of chemicals addressed in a number of European directives and regulation on chemicals. The research and support activities of the TCS are executed in close co-operation with the relevant authorities of the EU Member States, Commission services (such as DG Environment and DG Enterprise), the chemical industry, the OECD and other international organisations.

NO-LONGER POLYMER LIST  
VERSION 3

# No-Longer Polymers List

## Version 3

### Explanations

#### 1) *GENERAL*

Within the scheme of the notification of new substances (Directive 67/548/EEC) polymers are subject to special rules. The term polymer was further defined in the 7th amendment (92/32/EEC) of the Directive. This change means that some substances which were considered to be polymers under the reporting rules when the European Inventory of Existing Commercial Chemical Substances (EINECS) was being established are no longer considered to be polymers under the 7th amendment.

Polymers were not reportable for EINECS. As all substances which are not present in the EINECS inventory are notifiable, all “no-longer polymers” should in theory be notified.

However, at the time when the 7th amendment was adopted, the Council of Ministers made it clear that these no-longer polymers should not, retrospectively, become subject to notification. To facilitate the work of national Competent Authorities and the industry the Commission was requested to draw up a list of no-longer polymers.

Substances to be included in this list have been on the EU market between September 18, 1981, and October 31, 1993 and satisfy the requirement that they were considered to be polymers under the reporting rules for EINECS but are no longer considered to be polymers under the 7th amendment. Therefore to create the no-longer polymer list industry was asked to submit their candidates. The attached list is based on these submissions.

The list is not an exhaustive list. The Competent Authorities are the responsible bodies, who shall decide whether a substance is a no-longer polymer or not but as a basis, they have decided that all the substances included in the attached list are to be regarded as no-longer polymers. However, other substances may be regarded too as no-longer polymers if they satisfy the above conditions. The decisions shall be taken by the Competent Authority concerned on a case by case basis.

Any substance on this list or which is decided by a Competent Authority to meet the criteria is exempt from notification.

## **2) DEFINITIONS**

As polymers were not reportable and therefore not included in EINECS, in many cases it had to be decided whether a substance is a polymer or not by a desk examination of the submitted documents.

A widely used definition of polymers refers to the need for both a high molecular weight (more than 10.000) and a molecular weight distribution. In contrast, for decisions on the inclusion or otherwise in EINECS, the molecular weight of a substance was not taken into account.

Following the definition of the 7th Amendment a polymer is beside the molecular weight distribution also characterised “by the sequence of one or more types of monomer units and comprising a simple weight majority of molecules containing at least three monomer units which are covalently bound to at least one other monomer unit or other reactant and consists of less than a simple weight majority of molecules of the same molecular weight” (Directive 92/32/EEC, Art. 2, 1 c)).

The information available in the primary processing of substances reported for EINECS was not always sufficient to distinguish a polymer from a non polymer. In particular only the name and the CA registry number was known for substances reported on the A or B forms used for reporting. The first decision on whether a compound was a polymer or not had therefore to rely on the name and on the classification of the compounds in the Chemical Abstract Registry System. Whenever a substance based on the information available was suspected of being a polymer, a problem letter was issued, and the submitter was asked to supply more detailed information on the size and distribution of the molecular weight.

Therefore decisions taken for the inclusion of submitted substances in EINECS did not follow general rules without any exception. In some cases decisions were only based on the name of the submitted substance.

The no-longer polymer list contains only substances not included in EINECS. For legal reasons the definitions depend on the EINECS definitions and hence decisions on the notification status of e.g. a post-reacted NLP can be inferred by considering for this purpose an equivalence with EINECS rules. Further requests on declaration of substances as no-longer polymers have to be based on the rejection of a submission to EINECS (ref.: correspondence).

NLP-Nos and name descriptions take precedence. The CAS-RN given are to be treated as indicative and for a use as a searching tool.

## **3) THE NLP LIST CONSISTS MAINLY OF THE FOLLOWING GROUPS:**

- 3.1) *alkoxylated substances*
- 3.2) *oligomeric reaction products*
- 3.3) *oligomers from one monomer only*
- 3.4) *dimers and trimers*
- 3.5) *polymer-like substances containing 50% or more by weight of species with the same molecular weight*

### 3.1) ALKOXYLATED SUBSTANCES

Alkoxyated substances which represent no-longer polymers are named ethoxylated, propoxylated and butoxylated substances and are listed with the specification of the range of the average alkoxylation representing the no-longer polymers.

The range of the average alkoxylation has been identified assuming a symmetric disposition of the monomer units with equal length of the propagating chains.

### 3.2) OLIGOMERIC REACTION PRODUCTS

The oligomeric reaction products are described by their starting materials. However, to be in accordance with the nomenclature used for EINECS [i.e. IUPAC nomenclature for well defined substances, CAS nomenclature for UVCB's (substances of unknown or variable composition, complex reaction products or biological material)], the components of the oligomeric reaction products are named using IUPAC nomenclature for well defined substances and CAS-style nomenclature for UVCB's, e.g.:

*4,4'-Isopropylidenediphenol, oligomeric reaction products with 1-chloro-2,3-epoxypropane, reaction products with cyclohex-1,2-ylenediamine*

In the no-longer polymers which contain a structural unit which has polymer-like characteristics, the latter unit is identified by using the prefix "poly" in the name or using names represented by the structural repeating units, e.g.:

*Polymethylenepolyphenylene polyisocyanate, oligomeric reaction products with 2,2-bis(bromomethyl)propane-1,3-diol, polyethoxylated and polypropoxylated glycerol grafted with acrylonitrile and styrene, toluene diisocyanate and .alpha.,.alpha',.alpha.'-1,2,3-propanetriyltris[.omega.-hydroxypoly[oxy(methyl-1,2-ethanediyl)]]*

### 3.3) OLIGOMERS FROM ONE MONOMER ONLY

Homopolymers submitted which represent no-longer polymers are named as oligomers e.g.:

- *Styrene, oligomers*
- *4,4'-Methylenediphenyl diisocyanate, oligomers*

### 3.4) DIMERS AND TRIMERS

Substances representing dimers and trimers, as well as their reaction products, are considered No-Longer Polymers. They are listed as e.g.:

*Fatty acids, C<sub>18</sub>-unsatd., dimers*  
*Fatty acids, C<sub>18</sub>-unsatd., dimers, reaction products with...*

### 3.5) **POLYMER-LIKE SUBSTANCES CONTAINING 50% OR MORE BY WEIGHT OF SPECIES WITH THE SAME MOLECULAR WEIGHT**

These substances have the appearance of polymers because they contain 50% or more by weight of species with the same molecular weight. By definition they are no-longer polymers and labelled with \* in the list.

The use of the prefix “poly” in the chemical description of the substance does not mean that it is a polymer in the sense of the 7th Amendment. Only the definition given above is of importance.

There exist different types of them, exemplified as follows:

- a) \* *Poly(oxy-1,2-ethanediyl), .alpha.-butyl-.omega.-hydroxy*  
\* *Poly(1,1,2,2-tetrafluoro-1,2-ethanediyl),.alpha.-fluoro-.omega.-2-[3-((carboxylatomethyl) dimethylammonio)propylaminosulfonyl]ethyl*
- b) \* *Butene, homopolymer (products derived from either/or But-1-ene/But-2-ene)*  
\* *Propene, homopolymer, reaction products with maleic anhydride, monomethyl ester, lanthanum salts*
- c) \* *Formaldehyde, polymer with aniline, reaction products with maleic anhydride*  
\* *Adipic acid, polymer with hexane-1,6-diol and propylidynetrimethanol*

### 4) **SPECIAL NOMENCLATURE RULES**

The explanations given in the following may differ from other recognized nomenclature rules.

- For substances listed in the no-longer polymer list with an “alkyl range”, the chains are assumed to be “straight-chain and saturated” unless qualified with terms such as “branched”, “iso”, “unsaturated”, or “branched and linear “, e.g.:

*Alcohols C12-15, ethoxylated*

*Alcohols, C12-15-branched, ethoxylated*

*Alcohols, C12-15-branched and linear, ethoxylated*

- Compounds with an alkyl range in the name represent substances which are substituted by an alkyl group with a chain length with each alkyl present in the range. The alcohols listed above have a chain length of C<sub>12</sub>, C<sub>13</sub>, C<sub>14</sub>, and C<sub>15</sub>.

Each alkyl derivative is present and the degree to which each derivative is present in the substance is unknown.

Therefore broader alkyl ranges do not cover narrower ones or individual ones.

- Fatty acids listed as components in the no-longer polymer list are specified by the source, or the specific alkyl or alkyl range, e.g.:

*Fatty acids, tall-oil, oligomeric reaction products with...*

*Fatty acids, C<sub>16-18</sub> and C<sub>18</sub>-unsatd., oligomeric reaction products with...*

Fatty acids listed as components in the no-longer polymer list with an alkyl range and without any other specification represent *straight chain saturated fatty acids*

- **80% RULE:**

Mixture of oligomers or isomer mixtures are generally listed in the no-longer polymer list with the name of the main component only when present in the mixture with 80% or more. Thus dimer acid reported as fatty acids, C<sub>18</sub>-unstd. with 80% dimers, 15% trimers and 5% higher oligomers is listed in the no-longer polymer list as:

*Fatty acids, C<sub>18</sub>-unsatd., dimers, etc.*

The names listed in the no-longer polymer list result from the information given on the reporting forms. No interpretation of the forms has been made.

For disagreements with reported data, problem letters were issued in order to ensure the correct names of the reported substances.

**Abstract**

Within the scheme of the notification of new substances (Directive 67/548/EEC) polymers are subject to special rules. The term polymer was further defined in the 7th amendment (92/32/EEC) of the Directive. This change means that some substances which were considered to be polymers under the reporting rules when the European Inventory of Existing Commercial Chemical Substances (EINECS) was being established are no longer considered to be polymers under the 7th amendment.

Polymers were not reportable for EINECS. As all substances which are not present in the EINECS inventory are notifiable, all "no-longer polymers" should in theory be notified.

However, at the time when the 7th amendment was adopted, the Council of Ministers made it clear that these no-longer polymers should not, retrospectively, become subject to notification. To facilitate the work of national Competent Authorities and the industry the Commission was requested to draw up a list of no-longer polymers.

Substances to be included in this list have been on the EU market between September 18, 1981, and October 31, 1993 and satisfy the requirement that they were considered to be polymers under the reporting rules for EINECS but are no longer considered to be polymers under the 7th amendment. Therefore to create the no-longer polymer list industry was asked to submit their candidates. The attached list is based on these submissions.

The list is not an exhaustive list. The Competent Authorities are the responsible bodies, who shall decide whether a substance is a no-longer polymer or not but as a basis, they have decided that all the substances included in the attached list are to be regarded as no-longer polymers. However, other substances may be regarded too as no-longer polymers if they satisfy the above conditions. The decisions shall be taken by the Competent Authority concerned on a case by case basis.

Any substance on this list or which is decided by a Competent Authority to meet the criteria is exempt from notification.

The mission of the JRC is to provide customer-driven scientific and technical support for the conception, development, implementation and monitoring of EU policies. As a service of the European Commission, the JRC functions as a reference centre of science and technology for the Union. Close to the policy-making process, it serves the common interest of the Member States, while being independent of special interests, private or national.
